

## FIREFLY VIRTUAL CLASSROOM BEAT THE TRAVEL RESTRICTIONS

---

In today's economic climate, we are committed to offering innovative methods for you to continue to participate in **events/sessions** when you are joining remotely. The Firefly Virtual Classroom is a set of technologies and best practices that enable us to deliver the same interactive learning experience that you expect from Firefly, to both on-site and remote participants.

## VIRTUAL TRAINING

Using Cisco Webex Training Center, we can support fully virtual classes for both sales and technical training.

Our state-of-the-art remote lab infrastructure allows virtual participants to experience hands-on labs as easily and fully as on-site participants.

## HYBRID ON-SITE + VIRTUAL

Using Webex together with a digital whiteboard capture application, we enable complete agility in training deployment by supporting both on-site and virtual participation simultaneously.

## HOW IT WORKS

The Firefly Virtual Classroom is a live, instructor-led training. We use Cisco® Webex Training Center to deliver the classroom directly to your home or office PC. You will be connected to the classroom via teleconference or voice-over-IP. You will be able to ask questions and engage in discussions.

## HANDS-ON LABS

We use remotely accessible labs in all of our technical classes. You will have full access to remote desktop, console, and power management—just like students in our on-site classes. For team exercises, you will participate in virtual breakout sessions with your teammates to work as a group on labs and workshops.

## VIRTUAL WHITEBOARD

The Firefly Virtual Classroom allows you to participate virtually in on-site classes.

## COURSE KITS

Firefly is committed to going green and reducing our carbon footprint, as such we provide e-books in the classroom - Student and Lab guides. To enhance the experience, students may want to consider utilizing a large screen (to enable split screen) or have an additional screen such as a tablet or phone available in addition to their laptop.

The benefits of e-books are:

- You will have life-long access to the books in their e-library
- The books can be annotated in class with highlights, notes and boxes
- Materials can be viewed online and offline

## GETTING STARTED

We will email you specific instructions for connecting to the Webex session and teleconference before your class is scheduled to begin.
